

## Integrating PowerBI with SharePoint

**Length:** 1 Day

**Course Description:** Learn how to combine the visualization tools in Power BI with the collaborative power of SharePoint 365 to uncover more valuable insights from your data. In this course we will explore how Power BI can be integrated into SharePoint to create interactive and data-rich reports.

In addition, you will learn how to connect to data in lists and libraries and combine data from multiple locations throughout SharePoint. Then, you will see how to transform the data into stunning visualizations and publish your reports via Power BI services. Finally, you will also see how to add a new page to your SharePoint site and embed the reports, so they are easy to access by everyone within your organization.

**Learning objectives:**

- Explain how to connect to data in a SharePoint.
- Detail the steps for creating a custom column.
- Identify the problem when the URL to a data source is invalid.
- Describe how to link data between two tables.
- Recall the limitations of a dashboard on PowerBI
