

PMI Risk Management Professional (PMI-RMP) Exam Preparation

Length: 3 Days

Summary: This course offers an overview of project risk and risk management and is geared towards preparing students for the PMI Risk Management Professional certification exam. Course includes course material, module exercises, exam practice questions, and a full length practice exam.

Exam Objectives Covered: Risk Communication, Risk Analysis, Risk Response Planning, and Risk Governance.

Students will examine the elements of identifying and managing project risks to achieve predictable results on complex projects that require a higher level of risk management:

- Understand identification and management of risks through each phase of a project, mainly in use for information technology, software engineering, and product development
- Understand risk management practical methods on data collected from hundreds of project worldwide over the last 10 years, showing how to contend with the most 'impossible'-seeming projects

Performance-Based Objectives: Upon successful completion of this course, students will be able to:

- Learn from real life examples and tips that illustrate key principles in project risk analysis
- Learn how to link risk identification with aspects of project definition, project planning, available resources, project scope and scheduling
- Learn the use of high-level risk assessment tools

Target Student: This course is designed for project and program managers working on high risk projects.

Delivery Method: Instructor led, group-paced, classroom-delivery learning model with structured hands-on activities.
