iGrafx
Enterprise Modeling

Length: 1 Day

Summary: This course is designed to shorten the learning curve and ensure effective usage of iGrafx Enterprise Modeling applications in organizations. It supplies you with the skills and knowledge to make iGrafx Process for Enterprise Modeling and iGrafx Enterprise Modeler work for you and your organization. This course introduces creating enterprise data objects and relationships, and teaches students how to report on enterprise data.

COURSE CONTENT

Topic 1: Introduction to iGrafx

The iGrafx solution, including common windowing, toolbars, Help system, and other features are introduced.

Topic 2: Creating Enterprise Models

An Enterprise Model uses objects to describe your Enterprise, including the Process Architecture, Strategies, Resources, Risks, Controls, and more. This topic covers configuring your model, creating enterprise objects and relationships, and how to make your model available to Process Central users. This topic assumes that the student will learn how these objects are used in Process Central, and that a Process Central repository is available and configured.

Topic 3: Enterprise Analysis and Reporting

After you have created an enterprise model, and potentially also after graphical modeler client users have used enterprise data and made relationships (such as risks, measurements, RACI, etc.), you are ready to analyze and report on the state of your enterprise.
